

NDAA & TAA Compliance

To meet the demands of international markets and procurement standards, Fuho Technology is committed to offering a diverse range of high-quality surveillance products. We strictly comply with Section 889 of the U.S. National Defense Authorization Act (NDAA), which restricts the use of products and services from high-risk vendors, as well as the Trade Agreements Act (TAA), which requires products to originate from designated fair-trade countries.

From chipset selection and production processes to system integration, every step is rigorously controlled. Key research and development, along with primary manufacturing, are carried out in Taiwan to ensure full compliance with TAA origin requirements. Furthermore, we avoid using any non-compliant software technologies or components listed under NDAA Section 889 and maintain no partnerships with the named vendors or their affiliates.

We maintain strict quality control to ensure full transparency and reliability in our product sourcing. Our products are well-suited for deployment in both public and private sector environments, offering peace of mind to our clients.
