# Safety Precautions

---

## Dear Valued Customer,

Thank you for using our products. If you encounter any problem when using the product, please contact your direct supplier, and we will provide you with immediate service through them. We reserve the right to make any software or hardware upgrade to the product without prior notice. Please read and follow the product manual carefully before using the product.

Please read the following safety guidelines carefully before using the product. Make sure that you have followed and operate the product in the proper way. Please store this equipment away from children and/or infants in an unreachable area.

- Please use only the recommended power source.
- Do not attempt to disassemble, modify or heat the product.
- Avoid dropping or hitting the product on the ground or surface.
- To avoid injury, do not touch inside of the product after it has been dropped or when it's damaged.
- If the product emits smoke, odor or other abnormalities, please stop using the product immediately.
- Do not use organic solvents such as alcohol, benzene, or paint thinner to clean the product.
- Do not allow any liquid or foreign objects to enter the machine.
- Do not place the battery near heat sources or expose it to flame.
- Do not touch the power cord with wet hands.
- Do not use this device for power outlets or wiring accessories that exceed the specified voltage.
- Do not use a damaged power cable, plug, or one that is not fully plugged into an electrical outlet.
- Avoid contact with metal objects (such as pins or keys) or stains on the terminals or plugs.
- Please place and use this product at 0°C~40°C, avoid direct sunlight, or near the heat sources.
- Do not install this equipment in a humid environment.
- Do not expose this equipment to smokey and dusty environments.
- Avoid strong collisions, do not drop the machine.
- Please keep this product at a safe level, install it in a proper place, and pay attention to prevent this product from falling.
- Please install in a well-ventilated place, do not block the ventilation opening of this product.
- Use this device within the range of recommended current and voltage input/output.
- This equipment will be on for a long period of time, please do not place flammable and explosive materials next to the equipment to avoid safety hazards.

## A. Product Introduction

Temperature measurement thermal imaging adopts intelligent processor chips, intelligent video processors, and deep neural network processors.

It is a perfect combination of temperature measurement access control management, actively carry out image facial morphology, and actively recognize human face real-time intelligent processing and calculation processing. Different environments can also be selected in addition to synchronous temperature measurements for indoor, outdoor, and remote settings.

On top of that, simultaneous calculations to detect the current human body temperature quickly and accurately can also analyze and detect the real-time voice output warning if the temperature exceeds 37.5°C. It also provides the need for alarm sound and light warning on dry contact supply equipment.

It combines face recognition and active temperature detection, so a person is suspected of having a fever shall notify the controller.

It can prevent people with abnormal body temperature from entering and optimize people's flow to reduce the efficiency of measuring body temperature one by one manually. This can also avoid the risk of direct contact with suspected infected people and protect themselves and others.

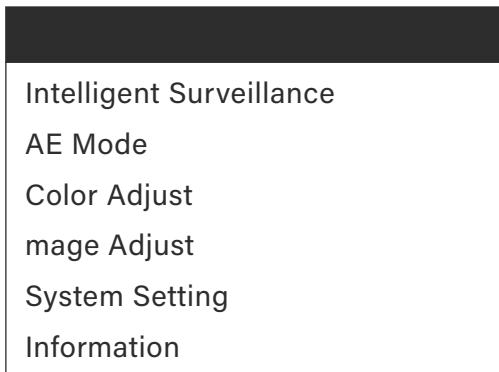

Take the initiative to complete all passing personnel's body temperature, fully raise the surface to improve the efficiency and accuracy of inspection prevention and achieve rapid and straightforward results.

## B. Product Specifications

Image Sensor	CMOS image sensor
Signal Mode	NTSC/PAL
Image Signal Processing System	Digital signal processing system
Viewing Angle	Viewing angle 57 degrees, Temperature Measuring 33 degrees
Effective Pixels	Image resolution 1296 (H) x 736 (V)
	Effective temperature measurement pixels 32(H) x 32(V)
Input Voltage	DC12V 1.5A
Power Consumption	170mA~280mA (Voice)
Video Image Mode	AI processor
AI Mode Temperature	Deep neural network processor
Measurement Temperature	Thermopile far-infrared sensor
Measurement Distance	>3 meters
Best Distance for Temperature Measurement	1~1.5 meters
Measurement Response Time	<1Sec
Working Environment Temperature	-20~65°C
Storage Environment Temperature	-40~85°C
Audio Output	Speaker output 8Ω 2W
Video Output	HD/HDMI (optional)
Face Detection Count	
(Measurement Rate) Temperature Measurement	1~5 people (95% ↑)
Distance and Temperature Error	1m ↓ ±0.3°C / 3m ↓ ±0.5°C
Language	Traditional Chinese, Simplified Chinese, & English (Select one)
Working Temperature	Image sensor-30°C-85°C 、 Temperature 15-42°C
Dimensions	205 x 93 x 83 mm
Weight	About 700g

## C. Setup

Get the image and set the camera menu from the video recorder or monitor.  
Make or change the settings in each menu.

### 1. Intelligent surveillance

1.1 Set Up Face Detection

1.2 Go to Intelligent Surveillance option and press  to enter the options to set the face sensitivity and heat map style.

### 2. AE mode

2.1 Go to AE Mode and press  to enter options to set exposure compensation mode.

### 3. Color adjust

3.1 Go to Color Adjust and press  to enter options to set color adjustment options and white balance.

### 4. Image Adjust

4.1 Go to Image Adjust and press  to enter options to set day/night shutter settings (this product does not support).

### 5. System setting

5.1 Go to System Settings and press  to enter options to set language and time settings

### 6. Information

6.1 Information

## 1. Intelligent Surveillance

### Set Face Detection

Manual setup instructions starts from here.

- a. Press  button to enter the main menu.
- b. Press  to enter Intelligent surveillance page, and use   buttons to select.  
Press  to enter. Press   to adjust , press  to exit the storage mode. Press  to save and exit.

Intelligent surveillance	
Intelligent surveillance	Face note 
AE mode	Close IS
Color adjust	
Image Adjust	
System setting	
Information	

Face note	
Face sensitivity	 1
Thermal map	 0
Frame	On / Off
Set range	(Right click setting)
Hot zone display	On / Off

### 1.1 Face note:

- Face sensitivity  
Face sensitivity is to adjust the speed of face detection and to quick display the face note, 0 being the fastest, 2 being the slowest, and the initial setting is 1.
- HeatMap Style  
The heat map style mainly changes the color gradation distribution of the heat map, providing 0~4 options, and the initial setting is 0.
- Frame  
When setting to capture a human face, select the marked face to be displayed in a box.
- Set range  
Set the warning area range.
- Hot zone display  
Set the range display of the guard zone.

## 2. AE Mode

Set AE Mode

- a. Press the **OK** button on the remote control to enter the display menu.
- b. Press **▶** button to enter AE Mode, press **▲▼** buttons to select items. Select and press **▶** to enter, and use **▲▼** to adjust. Press **OK** to confirm and exit setup page. Press **▶** to save and exit the setting.

### 2.1 Standard AE:

- Smart WDR

Auto-detects and adjust the exposure. When strong light sources illuminate high-brightness areas and shadows, and areas with low relative brightness in the backlight are present in the image simultaneously, the image is compensated for light contrast. The larger the value, the more the compensation effect, ranging from 0 to 20 selection. The initial setting is 4.

AE Mode	
Intelligent surveillance	Standard A <b>◎</b>
AE mode	BLC
Color adjust	HLC
Image Adjust	
System setting	
Information	

Standard A	
Smart WDR	 4

### 2.2 BLC

- Level

When a strong light source illuminates the background, the observed object is surrounded by a bright field, and the screen is dim. Select auto, low, medium, or high to make the observed object more obvious and clearer.

AE Mode	
Intelligent surveillance	Standard A
AE mode	BLC <b>◎</b>
Color adjust	HLC
Image Adjust	
System setting	
Information	

BLC	
Level	Auto
	Low
	Medium
	High

BLC Off

BLC On

## 2.3 HLC

- Set guard zone  
Set the range of strong light suppression area.

AE Mode	
Intelligent surveillance	Standard A
AE mode	BLC ☉
Color adjust	HLC
Image Adjust	
System setting	
Information	

HLC	
Set guard zone	(Right click to set)
Darkness compensation intensity	High
	Low
	Medium
Mask gray level	<input type="text" value="1"/>

- Darkness compensation intensity (Level)  
When a strong light source illuminates the background, the observed object is surrounded by a bright field, and the screen is dim. Select auto, low, medium, or high to make the observed object more obvious and clearer.
- Mask grayscale  
Set the color depth to be shielded in the over-exposed area. There are 1 ~ 6 levels, the larger the number, the closer to gray. The initial setting is 1.

HLC Off

HLC On

HLC zone setting: The red square is the HLC zone setting

## 3. Color Adjust

Set Color Adjustment

- a. Press the **OK** button on the remote control to enter the display menu.
- b. Press **▶** button to enter color adjust page, use **▲▼** select items. Select and press **▶** to enter, use **▲▼** to adjust, set to confirm, press **OK** to exit the storage mode, then press **▶** to save and exit.

### 3.1 Color adjust

- Auto White Balance  
Choose to set ATW2-10.5k (default) color temperature range auto white balance.  
Choose auto white balance for ATW2-8.5k color temperature range.
- Brightness  
Set the screen brightness ranging from 0 to 99. The initial setting is 50.
- Color-Red  
Set the screen color-red intensity ranging from 0 to 99. The initial setting is 50.
- Color-Green  
Set the screen color-green intensity ranging from 0 to 99. The initial setting is 50.
- Color-Blue  
Set the screen color-blue intensity ranging from 0 to 99. The initial setting is 56.
- Contrast  
Set the screen contrast ranging from 0 to 99. The initial setting is 56.

Color Adjust
Intelligent surveillance
AE mode
Color adjust <b>◎</b>
Image Adjust

Information

Color adjust	
White balance	ATW2-10.5k/ATW2-8.5k
Brightness	 50
Color-red	 50
Color-green	 50
Color-blue	 56
Contrast	 50

## 4. Image Adjustment

### Setup Image Adjustment

- a. Press the **OK** button on the remote control to enter the display menu.
- b. Press **▶** button to enter image adjust page. Use **▲▼** select items. Select and press **▶** to enter, use **▲▼** to adjust, set to confirm, press **OK** to exit the storage mode, then press **▶** to save and exit.

※ Except for the external input function with an open setting, the color, black and white, auto-progressive, and auto-standard functions are not issued.

Image Adjust

Image Adjust <b>◎</b>
System setting
Information

Image Adjust	
Day and night mode	External input
Digital low shutter	Auto
HDNR noise reduction	 16
Sharpness	 2
Temperature compensation	 50
Temperature measurement mode	Indoor

### 4.1 Ext

- Digital low shutter  
Auto、1/60、1/120、1/240、1/500、1/2000、1/5000、1/10000、1/100000、512x、256x、128x、64x、32x、16x、8x、5x、4x、3x、2x。
  - ※ Increase the exposure time to enhance sensitivity. Even in a low-light, dark environment, the picture is still bright.
- HDNR  
HDNR strength ranging from 0 to 32. The initial setting is 16.
- Sharpness  
Set the sharpness of the screen ranging from 0 to 7, the larger the number, the stronger the sharpness intensity. The initial setting is 2.
- TMP offset  
Temperature compensation: If the ambient temperature is compensated, it is used as an error compensation adjustment. The preset value is 50 to compensate 0°C, plus 1 to compensate 0.1°C, and the adjustment error range is  $\pm 5^{\circ}\text{C}$ .
  - ※ Please set up in a suitable constant temperature environment during installation to perform this machine's temperature compensation correction. You can refer to the body temperature measurement of an ear thermometer available in the market to obtain the best temperature detection by fine-tuning compensation.
- TMP Measurement  
Indoor and outdoor options

## 5. System Setting

- Press the **OK** button on the remote control to enter the display menu.
- Press **▶** button to enter image adjust page. Use **▲▼** select items. Select and press **▶** to enter, use **▲▼** to adjust, set to confirm, press **OK** to exit the storage mode, then press **▶** to save and exit.

### 5.1 System setting

- Language  
Support Traditional Chinese and English in main menu and audio setting. Press **▶** to set the language in the screen display.

System setting	
Intelligent surveillance	Language
AE mode	Monitor
Color adjust	Video Standard
Image Adjust	System Time
System setting <b>⊙</b>	IP Address

## 7. Temperature and Message Menu

Measured Temperature	Face Detection PIP	Temperature Display Value	Voice Broadcast	Text Display Value	Trigger an Alarm	Mask Notification and Voice
>42	NO	NO	Excessive Temperature	Excessive Temperature	YES	NO
39.1~42	YES	YES	Excessive Temperature	Excessive Temperature	YES	YES
37.6~39.0	YES	YES	Temperature abnormalities	Temperature abnormalities	YES	YES
34.4~37.5	YES	YES	Normal Temperature	Normal Temperature	NO	YES
32~34.3	NO	YES	NO	Abnormal Temperature	NO	NO
<32	NO	NO	NO	Abnormal Temperature	NO	NO

## 8. Installation Diagram

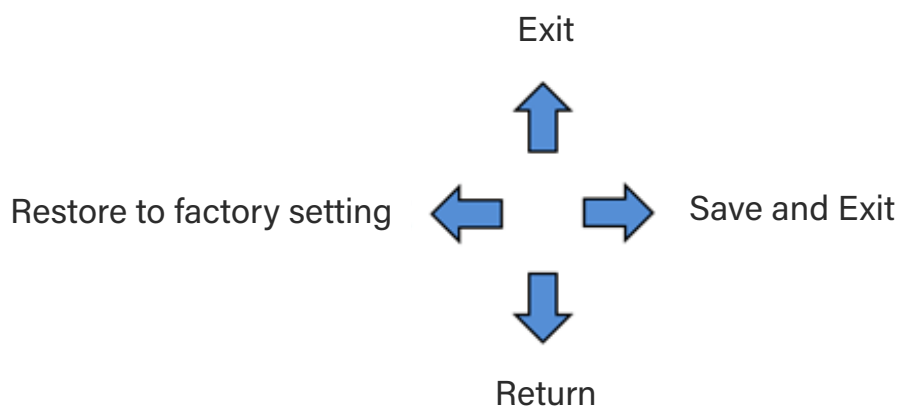

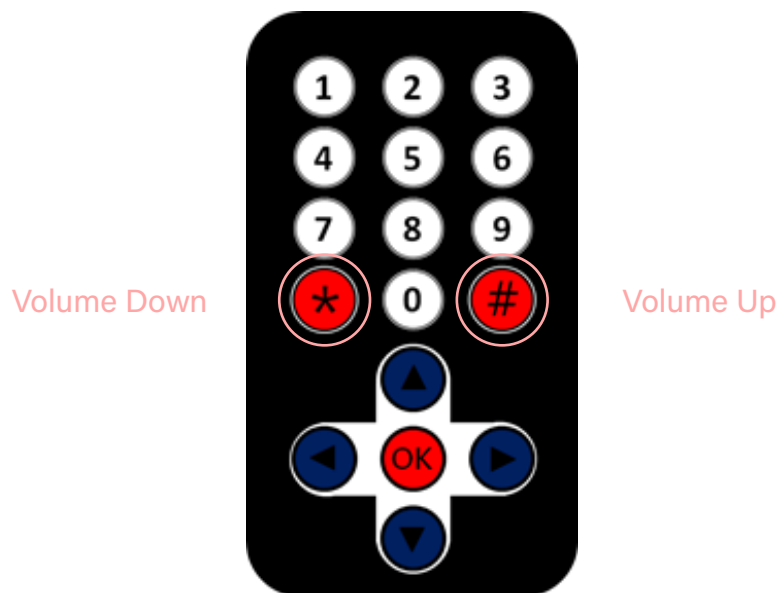

1. The installation environment is only for indoor use, avoid installation in the backlit environment as it will affect the temperature judgment.
2. Camera setting needs to be front facing to detect face of user, it will display temperature as confirmation for completion.
3. Thermal imaging and temperature measurement perform best when installed at 2 meter in height (same as the ear thermometer gun), should be calibrated with ear thermometer gun after setting up to 3~5 minutes.
4. 90% of the environment testing can be calibrated automatically, no need for manual calibration.

## 9. Infrared remote control with control description.

Press the OK button on the remote to enter the display menu.

Press  to enter  setting mode, and press  to exit save mode, then press  to save and exit.
